## Estrogen Flush

(Capsules)

Designed to serve both men and women, Estrogen flush is a worthwhile addition for anyone who wants to achieve the maximum benefit from their hormone therapy.

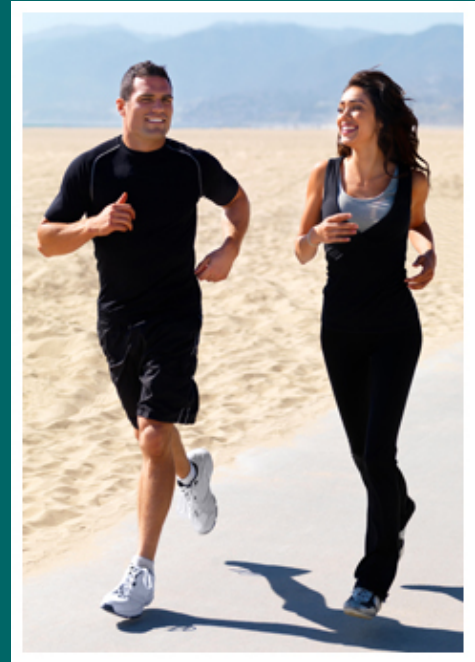

Men are most concerned about excess estrogen. Along with prescribed medications, any comprehensive anti-estrogen program should include a supplement that will help to reduce the level of estrogen already in the body. “Estrogen Flush” does just that!

This unique blend of ingredients also prevents the body from reabsorbing estrogen and allows it to be excreted from the body. “Estrogen Flush” also contains ingredients that reduce aromatase activity and prevent testosterone from being converted into estrogen.

- Calcium-D-Glucarate
- Zinc (as Zinc Oxide)
- DIM (Diindolylmethane)
- Japanese Knotweed Root Extract
- Chrysin

Women are most concerned about balancing estrogen and progesterone, and eliminating or preventing carcinogenic estrogen metabolites. “Estrogen Flush” aids women in avoiding estrogen dominance and helping their current hormone program to be more effective. “Estrogen Flush” plays a vital role in preventing cancer causing metabolites and instead directs the body to convert estrogen into cancer preventing metabolites instead. This is essential for any woman who is on hormone replacement therapy. Bottom line, this product will help to mitigate the risks associated with estrogen for women of all ages.

## Estrogen Flush

**Estrogen Flush's unique blend of ingredients prevents the body from reabsorbing estrogen and allows it to be flushed from the body. It also contains ingredients that help prevent testosterone from being converted into estrogen.**
